Power Jacks
More than just a screw jack

Power Jacks are a manufacturer focused on providing customers with the best engineered solution for precision linear actuation, power transmission and mechanical jacking.

Our expertise has been built on a history of engineering craftsmanship and design dating back to 1903. The facility in Scotland is the UK's largest screw jack manufacturing facility, that uses the latest engineering technologies to deliver quality products (BS EN ISO 9001:2008) that offer reliability, performance and economy.

Power Jacks is synonymous with screw jack technology and its development. We have been involved with Screw Jacks since the product was invented in the late 1930's and this gives us unparalleled experience in the design and manufacture of both standard and special designs.

Complimenting the screw jacks the Power Jacks portfolio also includes the design and manufacture of spiral bevel gearboxes, electric linear actuators and planetary roller screws. This enables us to offer our customers a complete linear motion and power transmission system and solution.

We know our customers demand our engineering expertise to help find a solution for their applications. We take pride in designing and delivering the best solution. This is what defines the Power Jacks range.

Introducing the new C-Series Screw Jack range from Power Jacks, delivering new levels of versatility and quality.

Created by a team of experienced design engineers, the focus was to provide our customers with a new compact cubic Screw Jack, which offers versatility in mounting methods. In addition to this, we wanted to design a jack that had the perfect combination of excellent performance, a long lasting service life, durability, flexibility and an extensive accessory list. Perfect for industrial applications operating individually or as a multi unit jacking system.

Over 140 Million Standard Configurations.

4 Standard Screw Jack Designs

- Standard
- Anti-Backlash*
- Anti-Rotation*
- Safety Nut

Anti-Rotation can be combined with standard, anti-backlash and safety nut designs.

* Translating screw configurations.

Gearbox Housing

Is one of the most functional features of the C-Series screw jack. Using a rugged cast housing made of either a highly durable SG Iron or Aluminium. This provides a strong housing that firmly and accurately holds the gear set in a reservoir of chosen lubricant suited to the most industrial demands.

Reliable Worm Gear set

Proven design used in millions of screw jacks.

Forced Grease Lubrication

Of lead screw. Radial lubrication holes on the worm gear allow the worm shaft to force grease through directly onto the lead screw threads. This lowers friction and operating temperature while increasing life.

Corrosion Protection

To suit all economic needs.

- Standard Industrial Paint Finish
- Arduous Environment Paint Finish
- Customer Specified Paint
- Plated Finish

Compact
Durable
Versatile
Dynamic

C-SERIES

Features

Special Features

2 Screw Lead Options
for each screw jack size

Over 140 million standard configurations

Worm Shaft Extensions
as standard double (both sides) or
optionally single extension (one side)

2 Gear Ratio Options
for each screw jack size

Aluminium Bronze Worm Gear
accurately hobbed for greater gear contact

Optimum lubrication
via 2 integrated systems

Delivering impressive rotary
to linear motion performance

P = Proximity Sensor

25 Extra Design ^{#8}

0 = None

S = Design Notes

Notes:

#1. Rotating screw models only.

#2. Trunnions on same side as worm shaft (standard).

#3. Trunnions at 90° to worm shaft.

#4. Standard right hand thread form. Worm shaft turns clockwise to extend screw.

#5. Left hand thread form. Worm shaft turns anti-clockwise to extend screw.

#6. Includes motor adaptor and coupling. IEC motor adaptor is standard.

#7. Limit switch mounting included.

#8. Design notes required to detail device/item specification.

#9. Plain end "A" has same dimensions as "E-threaded end" except no thread form.

Axial Backlash

Typical Axial Backlash Values:

- Standard Screw Jack is 0.12mm to 0.23mm
- Screw Jack with Anti-Backlash feature is adjustable to a minimum of 0.025mm.

Useful Formulae

$$\text{Input Speed (rpm)} = \frac{\text{Linear Speed (mm/min)} * \text{Gear Ratio}}{\text{Lead of Screw (mm)}}$$

$$\text{Input Power (kW)} = \frac{\text{Load (kN)} * \text{Lead (mm)} * \text{Input Speed (rpm)}}{60000 * \text{Efficiency} * \text{Gear Ratio}}$$

$$\text{Input Torque (Nm)} = \frac{\text{Load (kN)} * \text{Lead (mm)}}{2 * \pi * \text{Efficiency} * \text{Gear Ratio}}$$

Notes:

1. All metric machine screws have a trapezoidal thread form.
2. For loads of 25% to 100% of screw jack capacity, torque requirements are approximately proportional to the load.
3. Efficiency values for standard grease lubricated worm gear box and lifting screw.
4. All C-Series screw jacks have grease lubricated gearbox and lead screw as standard.
5. Torque required to prevent the lead screw or lead nut from rotating if no anti-rotation device fitted.
6. Radial force applied midway along worm shaft key at 90° to key.
7. Maximum transmittable torque through worm shaft, not through gear set.

Rotating Screw Jack 100kN

The figure illustrates the critical speed of a screw for different boundary conditions. The three diagrams show:

- Fixed/Free, $F_{CS} = 0.15$** : A screw fixed at one end and free at the other.
- Fixed/Supported, $F_{CS} = 0.7$** : A screw fixed at one end and supported at the other.
- Fixed/Fixed, $F_{CS} = 1$** : A screw fixed at both ends.

The graph plots **Critical Speed (rpm)** on the y-axis (logarithmic scale from 10 to 1000) against **Unsupported Screw Length (m)** on the x-axis (logarithmic scale from 1 to 10). A single curve represents the critical speed for the Fixed/Fixed condition ($F_{CS} = 1$). The curve starts at approximately 1000 rpm for 1 m length and decreases to approximately 80 rpm for 10 m length.

(Based on both ends fixed and 80% of the critical speed)

Anti-Backlash for Screw Jacks

The Anti-Backlash feature provides a reliable method to regulate the axial backlash in a screw jack for applications where there is a reversal of loading from tension to compression. The amount of backlash between the screw and worm gear nut can be adjusted (adjust shell cap) to a desired amount or a practical minimum. To avoid binding and excessive wear do not adjust backlash to less than 0.025mm.

The Anti-Backlash feature also acts as a safety device, providing dual nut load carrying unit, when the worm gear becomes worn.

A visual wear indicator is included as standard on all models and a "feeler" gauge can be used to measure the wear. This can be upgraded to use a sensor on request (consult Power Jacks).

Dimensions for Anti-Backlash

The dimensions for these screw jacks are the same as the standard units except those detailed below.

Model	CMT010-R	CMT025-R	CMT050-R	CMT100-R
A	140	155	205	260
B	32	32	40	50
C	10	22	28	37

C-SERIES

Anti-Rotation (Keyed) for Screw Jacks

The Anti-Rotation feature for translating screw jacks stops the lead screw from rotating without the need for end fixing. This is done by keying the lead screw. However the keyway in the screw will cause slightly greater than normal wear on the internal threads of the worm gear.

Benefits:

- Compact unit integrates anti-rotation into gearbox
- Dimensions are the same as the standard translating screw jack
- Standard round cover pipe for easy installation
- Proven industrial anti-rotation design

Performance for Anti-Rotation

Model		CMT010-K		CMT025-K		CMT050-K		CMT100-K	
Lead Screw	Lead (mm)	5	10	6	12	9	18	12	24

Note: Efficiency values for standard grease lubricated worm gear box and lifting screw. Anti-Rotation with Safety Nut performance is the same as the Anti-Rotation unit.

C-SERIES

with Safety Nut

Power Jacks metric machine screw jacks can be fitted with a safety nut, which provides 2 safety roles:

1. In the event of excessive wear on the nut thread the load will be transferred from the standard nut to the safety nut. This will also provide visual wear indication as the gap between the safety nut decreases to zero as the standard lifting nut wears.
2. In the unlikely event of catastrophic nut thread failure the safety nut will sustain the load. The safety of industrial and human cargo is therefore improved.

There are several configurations for each safety nut device as they only work in one load direction. For this reason when ordering please supply a sketch of your application showing load directions.

C = Load direction - Compression

T = Load direction - Tension

Translating Screw Jack with Safety Nut

The dimensions for these screw jacks are the same as the standard units except those detailed below.

Trunnion Mounts

Trunnion mounts provide a pivot point at the gearbox of the screw jack.

- 2 Pivot Plane Options
- Supplied with or without Trunnion Feet
- Option of Male or Female Trunnions
- Trunnion mounts can be mounted on either side of the screw jacks gearbox

When the trunnions are on the same side as the worm shaft multiple screw jacks can be linked in line with a drive shaft and pivot around a common axis.

The trunnion mounts are connected to the screw jacks gearbox with 4 bolts.

Limit Switches on Screw Jack Cover Pipe

Limit switches can be mounted on the screw jacks cover pipe to signal stroke positions such as end of travel. The switch is triggered by a cam or target disc on the end of the lead screw.

Features:

1. Inductive Proximity Sensors as standard. Others including electro-mechanical and safety rated available on request.
2. No contact, so no wearing parts.
3. 2 Wire sensor 24VDC for either Normally Closed (NC) or Normally Open (NO) switching.
4. Sensor has rugged one-piece Metal housing.
5. Optical setting aid
6. M12 Plug in connection for fast change-ability.
7. Sensor kit includes—sensor, mounting ring, target ring and modification to screw jack cover pipe.
8. Switch can have a fixed or adjustable mounting.
9. For full sensor details request Power Jacks design guide catalogue or download it from www.powerjacks.com

Rotary Limit Switches for Screw Jacks

RLS-51 Rotary cam limit switches can be used as end of travel limit switches with the option of intermediate switches. Each limit switch is individually adjustable over the entire stroke of the screw jack.

- 2 to 8 limit switches in one unit
- Useable revolutions from 4 to 16000
- Switch types include:
Changeover (Normally Closed/Open), Normally Closed, Gold or Silver contacts
- Maintenance free rotary cam gearbox
- Enclosure IP66 as standard
- Mounting options for B14 (face), B5 (flange) and B3 (foot)
- Available in 3 voltages 250VAC, 24VDC & 80VDC
- Maximum input speed 1800rpm
- Operating temperature -40°C to $+80^{\circ}\text{C}$
- Options for potentiometer, anti-condensation heaters and encoders
- Stage technology option to VBG70

Mounted onto a screw jacks free worm shaft as an alternative where cover pipe mounted limit switches are not possible e.g. rotating screw jacks.

For full details on the RLS-51 limit switch request a brochure from Power Jacks or download details from www.powerjacks.com

Introducing the high performance S-Series screw jack range from Power Jacks.

To meet the increasing industrial demands on machine screw jacks our team of experienced design engineers set out to provide our customers with a new high performance cubic machine screw jack.

It has typically 50% higher duty cycle capabilities than standard machine screw jacks, thus reducing the need for ball screw jacks or larger de-rated machine screw jacks in high duty applications. In addition the range is engineered to have a long lasting service life, high durability, large selection of configurations, versatile mounting and an extensive accessory list. Ideal for applications that demand more from a machine screw jack, but do not warrant a ball screw jack. Installed singularly or as part of multi-unit jacking systems.

Over 350 Million Standard Configurations per Model Type.

4 Standard Screw Jack Designs

- Standard
- Anti-Backlash*
- Anti-Rotation*
- Safety Nut

Anti-Rotation can be combined with standard, anti-backlash and safety nut designs.

* Translating screw configurations.

Gearbox Housing

Design optimised for high thermal efficiency. Recognisable by the exterior fins, which increase surface area. The housing is cast using a highly durable SG Iron.

This provides a strong housing that firmly and accurately holds the gear set in a reservoir of chosen lubricant suited to most industrial demands.

Reliable Worm Gear Set

Proven gear geometry used in millions of screw jacks.

Oil Filled Gearbox

For optimum lubrication and cooling of the worm gear set at up to 3000 rpm input.

Lead Screw Grease

Rated for extreme pressure to ensure correct lubrication at all rated loads.

Corrosion Protection

To suit all economic needs.

- Standard Industrial Paint Finish
- Arduous Environment Paint Finish
- Customer Specified Paint
- Plated Finish

20 Worm Shaft Ends

0 = Both

L = Left Hand Side Only

R = Right Hand Side Only

21 Worm Shaft Type

0 = Standard Material

N = Nickel Plated

C = Chrome Plated

S = Stainless Steel

22 Stop Nut

0 = No Stop Nut

P = Full Power Stop Nut

23 Safety Nut

0 = No Safety Nut

T = Safety Nut Tension

C = Safety Nut Compression

24 Gearbox Mounting

B = Base Mount

T = Trunnion Mount
Standard^{#7}

U = T + Trunnion Feet

X = Trunnion Mount 90°^{#8}

Y = X + Trunnion Feet

25 Limit Switch^{#9, #10}

0 = None

L = Electro-Mechanical
Limit Switch

R = Rotary Cam Limit Switch

P = Proximity Sensor

Notes:

#1. Rotating screw models only.

#2. Standard right hand thread form. Worm shaft turns clockwise to extend screw.

#3. Left hand thread form. Worm shaft turns anti-clockwise to extend screw.

#4. Factory designated number for special design.

#5. Grease filled gearbox recommended for normal running input speed below 500rpm.

#6. Includes motor adaptor and coupling. IEC motor adaptor is standard.

#7. Trunnions on same side as worm shaft (standard).

#8. Trunnions at 90° to worm shaft.

#9. Limit switch mounting included.

#10. Design notes required to detail device/item specification.

#11. Plain end "A" has same dimensions as "E – threaded end" except no thread form.

Axial Backlash

Typical Axial Backlash Values:

- Standard Screw Jack is 0.12mm to 0.23mm
- Screw Jack with Anti-Backlash feature is adjustable to a minimum of 0.025mm.

Useful Formulae

$$\text{Input Speed (rpm)} = \frac{\text{Linear Speed (mm/min)} * \text{Gear Ratio}}{\text{Lead of Screw (mm)}}$$

$$\text{Input Power (kW)} = \frac{\text{Load (kN)} * \text{Lead (mm)} * \text{Input Speed (rpm)}}{60000 * \text{Efficiency} * \text{Gear Ratio}}$$

$$\text{Input Torque (Nm)} = \frac{\text{Load (kN)} * \text{Lead (mm)}}{2 * \pi * \text{Efficiency} * \text{Gear Ratio}}$$

Notes:

- All metric machine screws have a trapezoidal thread form.
- For loads of 25% to 100% of screw jack capacity, torque requirements are approximately proportional to the load.
- Efficiency values for standard lubricated worm gearbox and lead screw.
- For normal running speeds above 500 rpm the gearbox is oil lubricated and grease lubricated below 500 rpm. The lead screw is grease lubricated in both cases.
- Torque required to prevent the lead screw or lead nut from rotating if no anti-rotation device fitted.
- Radial force applied midway along worm shaft key at 90° to key.
- Maximum transmittable torque through worm shaft, not through gear set.
- Available on request (AOR) , consult Power Jacks.

Anti-Backlash for Screw Jacks

The Anti-Backlash feature provides a reliable method to regulate the axial backlash in a screw jack for applications where there is a reversal of loading from tension to compression. The amount of backlash between the screw and worm gear nut can be adjusted (adjust shell cap) to a desired amount or a practical minimum. To avoid binding and excessive wear do not adjust backlash to less than 0.025mm.

The Anti-Backlash feature also acts as a safety device, providing dual nut load carrying unit, when the worm gear becomes worn. It can also be fitted with a wear indicator for critical applications. This can be further upgraded to use a sensor for automatic detection (consult Power Jacks).

The S-Series Anti-Backlash screw jacks are available with an inverted screw design for maximum design flexibility (refer to diagram on the left).

Dimensions for Anti-Backlash

The dimensions for these screw jacks are the same as the standard units except those detailed below.

Anti-Rotation (Keyed) for Screw Jacks

The Anti-Rotation feature for translating screw jacks stops the lead screw from rotating without the need for end pinning. This is done by keying the lead screw. However the keyway in the screw will cause greater than normal wear on the internal threads of the worm gear.

Dimensions for Anti-Rotation

The dimensions for these screw jacks are the same as the standard units except those detailed below.

Model	ST025-K	ST050-K	ST100-K	ST200-K

S-SERIES

Anti-Rotation with Anti-Backlash or Safety Nut

The anti-rotation feature can be combined with the Anti-Backlash or Safety Nut mechanism into one screw jack. For this option the anti-rotation device is located in-line with the cover pipe. As with the standard anti-backlash screw jack these are also available with an inverted screw design for maximum design flexibility (refer to diagram below).

Dimensions for Anti-Backlash with Anti-Rotation (Keyed)

The dimensions for these screw jacks are the same as the standard anti-backlash units except those detailed below.

Model	ST025-Y	ST050-Y	ST100-Y	ST200-Y

S-SERIES

with Safety Nut

Power Jacks metric machine screw jacks can be fitted with a safety nut, which provides 2 safety roles:

1. In the event of excessive wear on the nut thread the load will be transferred from the standard nut to the safety nut. This will also provide visual wear indication as the gap between the safety nut decreases to zero as the standard lifting nut wears.
2. In the unlikely event of catastrophic nut thread failure the safety nut will sustain the load. The safety of industrial and human cargo is therefore improved.

There are several configurations for each safety nut device as they only work in one load direction. For this reason when ordering please supply a sketch of your application showing load directions.

Translating Screw Jack with Safety Nut

Trunnion Mounts

With Trunnion Feet

With Trunnion Feet

Male Trunnion

Female Trunnion

Trunnion mounts provide a pivot point at the gearbox of the screw jack.

- 2 Pivot Plane Options
- Supplied with or without Trunnion Feet
- Option of Male or Female Trunnions
- Trunnion mounts can be mounted on either side of the screw jacks gearbox

When the trunnions are on the same side as the worm shaft multiple screw jacks can be linked in line with a drive shaft and pivot around a common axis.

The trunnion mounts are connected to the screw jacks gearbox with 4 bolts.

Limit Switches on Screw Jack Cover Pipe

Limit switches can be mounted on the screw jacks cover pipe to signal stroke positions such as end of travel. The switch is triggered by a cam or target disc on the end of the lead screw.

Features:

1. Inductive Proximity Sensors as standard. Others including electro-mechanical and safety rated available on request.
2. No contact, so no wearing parts.
3. 2 Wire sensor 24VDC for either Normally Closed (NC) or Normally Open (NO) switching.
4. Sensor has rugged one-piece Metal housing.
5. Optical setting aid
6. M12 Plug in connection for fast change-ability.
7. Sensor kit includes – sensor, mounting ring, target ring and modification to screw jack cover pipe.
8. Switch can have a fixed or adjustable mounting.
9. For full sensor details request Power Jacks design guide catalogue or download it from www.powerjacks.com

Rotary Limit Switches for Screw Jacks

Rotary limit switches can be used as end of travel limit switches with the option of intermediate switches as well. Each limit switch is individually adjustable over the entire stroke of the screw jack.

- 2 to 8 limit switches in one unit
- Useable revolutions from 4 to 16000
- Switch types include:
Changeover (Normally Closed / Open), Normally Closed, Gold or Silver contacts
- Maintenance free rotary cam gearbox
- Enclosure IP66 as standard
- Mounting options for B14 (face), B5 (flange) and B3 (foot)
- Available in 3 voltages 250VAC, 24VDC and 80VDC
- Operating temperature -40°C to $+80^{\circ}\text{C}$
- Options for potentiometer, anti-condensation heaters and encoders are available
- Stage technology version to VBG70 available

These units are mounted onto a screw jacks free worm shaft and offer an alternative where cover pipe mounted limit switches are not possible e.g. rotating screw jacks. For full details on the RLS-51 limit switch request a brochure from Power Jacks or download details from www.powerjacks.com

- Machine Screw & Ball Screw
- Low load, Medium Duty, High Speed
- Dynamic Load Ratings up to 10kN
- Linear Speeds up to 5500 mm/min
- 3-phase AC, 1-phase AC, and DC types
- Special Designs Available

Rolaram Linear Actuators

- Ball Screw & Roller Screw
- High load, High Duty, High Speed
- Very High Accuracy
- Dynamic Load Ratings up to 400kN
- Linear Speeds up to 7000 mm/min
- 3-phase AC, 1-phase AC, and DC types
- Special Designs Available

Spiracon Roller Screws

- High Dynamic Loads up to 1200kN
- High Efficiency
- High Positional Accuracy
- Long Life
- Low Maintenance
- Low Noise
- Robust Design for Harsh Environments
- Special Designs Available

Neeter Drive Bevel Gearboxes

- 2-way, 3-way and 4-way Designs
- Solid Shaft & Hollow Shaft
- Motor Adaptors
- Gear Ratios 1:1, 1.5:1, 2:1, 3:1 and 4:1
- Torque Ratings up to 3000Nm
- Special Gear Ratios and Designs Available

PRECISION SCREW JACKS . ELECTRIC LINEAR ACTUATORS .
PLANETARY ROLLER SCREWS . SPIRAL BEVEL GEARBOXES .
